

## James Stacy Coles/Littlefield Summer Research Fellowships in Chemistry and Biochemistry

**Application 2010**

**DUE: 5pm, March 2, 2010**

Thanks for considering our program! A few notes on the application. We ask that you talk to several professors before filling out the form; we are asking that you list the your top three choices for projects so that we can accommodate as many students as possible. Simply stop by and ask them if they would like to tell you about their research (they do!). Based upon our past experience, your chances of being offered a position in any particular professor's lab is increased by actually talking to them before they see this application (that is to say- simply writing their name below carries much less weight than does stopping in to talk with them ahead of time).

Thanks again for applying. Remember, the form is due in Prof. Christensen's office by **5:00pm, Tuesday, March 2, 2010**.

**Juniors:** You are also eligible to apply for Surdna Fellowships, through the Office of Student Fellowships and Research. This application is also due March 2nd at noon (but turned into the Office of Student Fellowships and Research, 108 Bannister), and it is a bit more involved. Please see you favored advisor early so that you might have the best possible application. We highly recommend applying for these awards.

Name

Class Year

Bowdoin Address

Home Phone

Email Address

Academic Major or Intended Major

Academic Minor

Please list relevant science and math courses you have taken at the College level as well as those in which you are currently enrolled. Also note if you received AP credit for any others not listed.

In the spaces below, please list your top three preferred research areas using the name of the corresponding Professor. (1 is top choice: please provide 3) If you talked with them about a specific project that really interests you, provide that information, too. Remember that a match between you and a Professor is much more likely if that Professor has actually talked with you before!

- 1.
- 2.
- 3.

Please supply a statement that explains your interest in doing research this summer and how you expect that this experience will impact your career development. You may want to tell what about each project described above will impact you the most.
