The following tables show 1986 characteristics of All Sibling pairs by attrition status in 1999 and 2007  
 The left segment of the table counts a pair as attriting if either leaves the sample, the right segment of the table counts a pair as attriting if the older sibling leaves the sample

Tables referenced in Footnote #9 in Fitzgerald 2010  
 The left segment of table 2A is table 5A in Fitzgerald 2010

Each observation represents a sibling pair  
 Weighted by 1968 individual weight of older sib.  
 For correlations: goodhealth is good/excellent health on 5 point scale; Labor Income is average over age 25-34; Education is years of education at age 24.  
 For correlations: Robust standard error in parentheses. Asterisks indicate significantly different from zero (\*=.1, \*\*=.05, \*\*\*=.01)

**Table 1A: 1986 characteristics by attrition status for All Sib Pairs if in 1999**

Sample: Adults 18-34 in 1968 who were sample children 0-16 in 1968

Current table for 1986 characteristics by in or out in 99, where out is for reason other than death by 1986 because it is based on whyInr for 1986.

Notes: sample size is for health correlations

goodhealth is good/excellent health

Labor Income is average over age 25-34

Education is years of education at age 24

The following tables show 1986 characteristics of Male Sibling pairs by attrition status in 1999 and 2007  
The left segment of the table counts a pair as attriting if either leaves the sample, the right segment of the table counts a pair as attriting if the older sibling leaves the sample

Tables referenced in Footnote #9 in Fitzgerald 2010  
The left segment of table 2M is table 5B in Fitzgerald 2010

Each observation represents a sibling pair  
Weighted by 1968 individual weight of older sib.  
For correlations: goodhealth is good/excellent health on 5 point scale; Labor Income is average over age 25-34; Education is years of education at age 24.  
For correlations: Robust standard error in parentheses. Asterisks indicate significantly different from zero (\*=.1, \*\*=.05, \*\*\*=.01)

**Table 1M: 1986 characteristics by attrition status for Male Sib Pairs if in 1999**

Sample: Adults 18-34 in 1968 who were sample children 0-16 in 1968

Current table for 1986 characteristics by in or out in 99, where out is for reason other than death by 1986 because it is based on whyInr for 1986.
