LIFECYCLE: Asset Allocation

The Fidelity Freedom Funds® are represented on a separate spectrum because each fund (except Fidelity Freedom Income) will gradually adjust the asset allocation to be more conservative as the funds approach their target dates and beyond. Approximately ten to fifteen years after the target date, the asset allocation of each fund will match the allocation of the Freedom Income Fund. The spectrum illustrates the relative risk and return of each fund as compared to the funds in the Freedom family. The spectrum does not represent actual or implied performance.
