

In-class work: Selection

Laura Toma, csci2200, Bowdoin College

1. (CLRS 9.3-1) In the algorithm SELECT, the input elements are divided into groups of 5. Will the SELECT algorithm work in linear time if they are divided into groups of 7? Argue that SELECT does not run in linear time if groups of 3 are used.
2. (CLRS 9.3-3) Show how QuickSort can be made to run in $O(n \lg n)$ time in the worst case, assuming that all elements are distinct.
