Instructions for using data

There are 6 STATA .do files. The name of the .do file indicates the modeled crop and whether or not the code evaluates yield under climate change or not ('CC' indicates the code that considers climate change). Therefore, code that does not have a 'CC' in the file name predicts contemporaneous yields.

The dataset "AllData.txt" is used by all .do files. Before running a .do file you will need to change the file path so that it points to where you have placed the "AllData.txt" file.
