

## Bowdoin Summer Research Fellowships – Project Proposal Guidelines

As part of this application, you will be asked to upload a **PDF** of your complete project proposal, which should not exceed two single-spaced pages. Please include your full name and project title at the top of the first page.

Your project proposal should be written with the summer research fellowship [selection criteria](#) in mind; please read them carefully before you begin. In addition, **include labeled sections in your project proposal** addressing, at a minimum, the following:

- Description of the proposed project
- Feasibility/scope of the proposed project, including timeline
- Relevance and significance of the proposed project
- Potential for learning

In addition, be aware that an interdisciplinary committee will review your application. It should, therefore, be free of unnecessary jargon (or with specific terms defined) and **easy to understand by a non-specialist**. Finally, your project description should convey a high level of professionalism and be submitted after approval from your faculty mentor.
