

# Code Injection Attacks

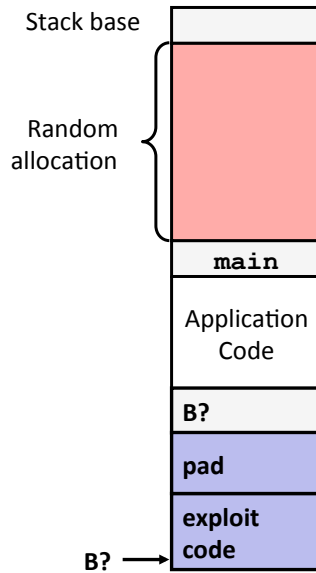

# Write Secure Code (!)

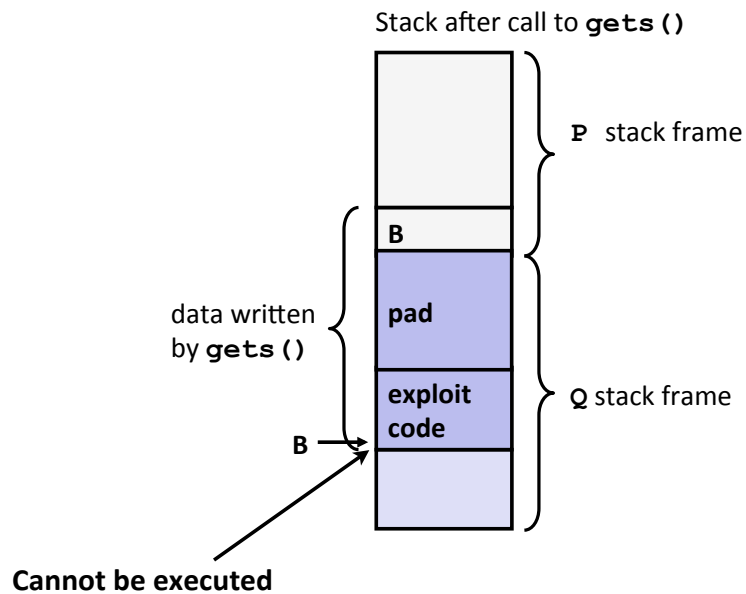

- Example: length-limited string routines
  - `fgets`, `strncpy`, ...
- No `%s` in `scanf`

```
/* Echo Line */
void echo() {
    char buf[4]; /* Way too small! */
    fgets(buf, 4, stdin);
    puts(buf);
}
```

# Stack Randomization (ASLR)

# Non-executable Memory Segments

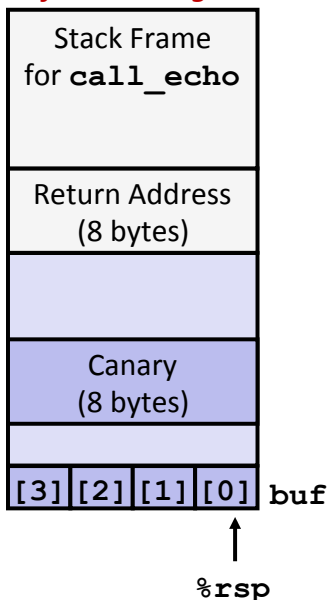

# Stack Canaries

# Stack Canary Example

*Before call to gets*

```
/* Echo Line */  
void echo() {  
    char buf[4]; /* Way too small! */  
    gets(buf);  
    puts(buf);  
}
```

echo:
