Diagram illustrating the mapping between bit patterns, signed integers, and unsigned integers. The bit patterns are shown in the first column. The signed integers are shown in the second column, and the unsigned integers are shown in the third column. The mapping is shown by arrows: a double-headed arrow with an equals sign (=) connects the signed and unsigned columns for bit patterns 0000 through 0111. A double-headed arrow with ± 16 connects the signed and unsigned columns for bit patterns 1000 through 1111.

```
float sum_elements(float a[], unsigned length) {  
  
    int i;  
    float result = 0;  
  
    for (i = 0; i <= length - 1; i++) {  
        result += a[i];  
    }  
  
    return result;  
}
