## CSCI 2330 - Bit Puzzle Exercises

Assuming that $\mathbf{X}$ and $\mathbf{Y}$ are 32-bit, 2's complement (signed) ints, write an expression using $\mathbf{X}$ and/or $\mathbf{Y}$ that evaluates to each value specified below.

Operators are restricted to the following: bitwise AND, OR, NOT, XOR, left shift, (arithmetic) right shift, addition, and logical NOT, i.e.:

$$
\text { \& } \quad \text { ~ } \wedge \quad \ll \gg+
$$

Constants are restricted to values in the range 0-255 (0x00 through 0xFF).

1. A value that is the negation of $X$.

Example: $\quad 0000 . . . .0000011 \Rightarrow 1111 \ldots . .111111101$ (i.e., $3-3$ )
(Hint: 2's complement)
2. A value that contains the 6th bit of $X$ with all other bits zeroed.

$$
\begin{array}{ll}
\text { Examples: } & 1111 \ldots . . .11111111 \Rightarrow 0000 \ldots . . .000100000 \\
& 0000 \ldots . .00000000 \Rightarrow 0000 \ldots . . .000000000 \\
& 0000 \ldots . . .01000001 \Rightarrow 0000 \ldots . .000000000
\end{array}
$$

(Hint: use a mask)
3. The value 1 if X equals Y and the value 0 otherwise.
(Hint: XOR)
4. The value 1 if the 15 th bit of $X$ is a 1 and the value 0 otherwise.
(Hint: remember the limits on constant sizes)
5. The value -1 if $X<0$ and the value 0 otherwise.
(Hint: sign extension)
6. The value -1 if $X<0$, the value 0 if $X$ equals 0 , and the value 1 if $X>0$.
(Hint: start with prior expression and augment with OR)
